Appothetical protein STY0378 [imported] - Salmonella enterica subsp. enterica subsp. C. Species: Salmonella enterica subsp. enterica serovar Typhi.

A. Mote: this species has also been called Salmonella typhi.

A. Mote: this species has also been called Salmonella typhi.

C. Date: 09-Nov-2001 #sequence_revision 09-Nov-2001 #text_change 09-Nov-2001

C. Accession: ACO045

I- FUNCTION: INHIBITS FACTOR X (X(A)) DIRECTLY AND, IN A XA-DEPENDENT
WAY, INHIBITS VI(A)/TISSUE FACTOR ACTIVITY, PRESNMABLY BY FORMING
A QUATERNARY X(A)/LACI/VI(A)/TF COMPLEX. IT POSSESSES AN
ANTITHROMBOTIC ACTION AND ALSO THE ABILITY TO ASSOCIATE WITH
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         LIPOPROTEINS IN PLASMA.

-!- SUBCELLULAR LOCATION: Secreted.
-!- ALTERNATIVE PRODUCTS: 2 isoforms; alpha/TrPIalpha (shown here) and beta/TrPIbeta; are produced by alternative splicing.
-!- TISSUE SPECIFCITY: MOSTLY IN ENDOTHELIAL CELLS.
-!- DOMAIN: THIS INHIBITOR CONTAINS THREE INHIBITORY DOMAINS.
-!- PTM: O-GIYCOSYLATED.
                                                                                                                                                                                                                                                                                                                            CARBOHYDRATE-LINKAGE SITES.

"Revised cDNA sequence of rabbit tissue factor pathway inhibitor.";
Thromb. Res. 69:547-553(1993).
-!-FUNCTION: INHIBITS FACTOR X (X/A) DIRECTLY AND, IN A XA-DEPENDENT
WAY, INHIBITS FACTOR X (X/A) DIRECTLY AND, IN A XA-DEPENDENT
WAY, INHIBITS FACTOR X (X/A) DIRECTLY PRESUMABLY BY FORMING
A QUATERNARX X(A)/LAGI/VII(A)/TF COMPLEX. IT POSSESSES AN
ANTITHROMBOTIC ACTION AND ALSO THE ABILITY TO ASSOCIATE WITH
LIPOPROTEINS IN PLASMA.
-!- SUBCELLULAR LOCATION: Secreted.
-!- DOMAIN: THIS INHIBITOR COWTAINS THREE INHIBITORY DOMAINS.
-!- SIMILARITY: CONTAINS 3 BPII/KUNITZ INHIBITOR DOMAINS.
                                                                                                                                                                                                                                                                                                                                                                   TFPI_RABIT STANDARD, PRT, 300 AA.

DNA RINGS, INCLUDING CATENANES AND KNOTTED RINGS.

-!- CATALYTIC ACTIVITY: ATP-dependent breakage, passage and rejoining of double-stranded DNA.
-!- SUBUNIT: MADE UP OF TWO CHAINS. THE A CHAIN IS RESPONSIBLE FOR DNA BREAKAGE AND REJOINING; THE B CHAIN CATALYZES ATP HYDROLYSIS. THE ENZYME FORMS AN A2B2 TETRAMER.
-!- SIMILARITY: BELONGS TO THE TYPE II TOPOISOMERASE FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            STRAIN-WASH JOSH 3109;

FUNCTION: DIGESTS DOUBLE-STRANDED RNA. INVOLVED IN THE PROCESSING
                                                                                                                                 phosphomonoester.
--- SUBCELLULAR LOCATION: Cytoplasmic (By similarity).
--- SIMILARITY: CONTAINS 1 DRBM (DOUBLE-STRANDED RNA-BINDING) DOMAIN.
--- SIMILARITY: CONTAINS 1 RNASE III DOWAIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                            Herrmann J.M., Neupert W., Stuart R.A.;

"Insertion into the mitochondrial inner membrane of a polytopic protein, the nuclear-encoded Oxalp.";

EMBO J. 16:2217-2226(1997).

-!- FUNCTION: REQUIRED FOR FOST-TRANSLATIONAL STEP OF CYTOCHROME OXIDASE BIOGENESIS. SEEMS TO INVOLVED IN THE PROTEOLYTIC PROCESSING OF CYTOCHROME OXIDASE SUBURT 2.

-!- SUBCELLULAR LOCATION: Integral membrane protein. Mitochondrial.

-!- SIMILARITY: BELONGS TO THE OXAl / 60 KDA IMP FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         MITOCHONDRIAL INTERMEMBRANE (PROBABLE)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         MITOCHONDRIAL INTERMEMBRANE (PROBABLE)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               used in the construction of the chimeric proteins or muteins of the invention. These proteins comprise one of these heparin binding sites in conjunction with a first, second and third Kunitz-type domain derived from TFPI or TFPI-2. The kunitz-type domain sequences are highly basic and may be involved in cell surface localisation by glycosaminoglycan (including heparin) or phospholipid binding. These muteins have one or
                                                                          A glycosaminoglycan binding peptide (AAW06883) derived from antithrombin III is used in novel chimeric proteins of the formula A-R1-B1-B2-C, where A and C are peptides (AAW06875-79, AAW06883-90) able to bind glycosaminoglycans (Gep. heparin) present on cell surfaces. RI is membrane co-factor protein (MCP) or decay accelerating factor (DAF). R 2 is DAF when RI is MCP or MCP when RI is DAF, and B is a peptide that may have complement inhibitor activity. The chimmeric proteins (see also AAW06882) are directed to cell surfaces where they inhibit complement-mediated cell lysis. They are used to treat and prevent disease states in which complement plays a role, e.g. sepsis, adult respiratory distress syndrome, reperfusion injury and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The sequences given in AAR92266-74 are heparin binding sites which were

More substitutions exclusively in the P1-reactive site of one or more Kunitz-type domains. The chimeric proteins and muteins may be used in a pharmaceutical composition for the treatment of sepsis, septic shock and thrombosis disorders. The proteins may be generally useful in the treatment of diseases caused by the up-regulation of tissue factor bought on by injury, trauma, endotoxin, TNF, cancer, IL-1 or other agents or conditions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention describes peptides (I) used in the treatment of bleeding tendency, (I) have haemostatic activity and can be used in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              bleeding tendency. (I) have haemostatic activity and can be used in the inhibition of bleeding tendency. (I) can be used in the treatment of bleeding tendency assused by the administration of heparin during extracorporeal circulation. The present sequence represents a peptide which is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Bleeding tendency treatment related peptide HBP-3 SEQ ID NO:14.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to a peptide (AAM48111), which has high affinity to heparin. Also claimed are (1) a carrier in which a peptide (AAM48115) is combined; (2) a carrier in which a peptide (AAM48115) is combined; (3) a carrier in which a peptide (AAM48118 and AAM48120) is combined; (4) a method for separating and purifying an antithrombotic active fraction in heparin molecule in which a solution containing heparin itself or a treated product of heparin is contacted to the above carrier, and a heparin antithrombotic active fraction prepared by the above method. The antithrombotic fraction in heparin molecule is useful as an antithrombotic agent. The present peptide was used in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Protein expression; monocotyledon plant cell; glycosylated abhal -antitrypsin; AAT; glycosylated antithrombin III; AATI; human serum albumin; HSA; subtilisin BPN'; treatment; emphysema; antithrombotic; blood replacement.

ATILITY. The protein is used to exemplify the invention. The specification describes a method for producing mature heterologous protein in monocotyledonous plant cells. The method comprises transforming the cells with a chimeric gene comprising a monocotyledonous plant cells. The method comprises transforming the cells with a chimeric gene comprising a monocotyledon transcription regulator, inducible either during seed maturation or by addingy/removing a small molecule, DNA encoding the heterologous protein, and DNA encoding a signal peptide, with the signal peptide causing secretion of the protein from the cell. Proteins expressed in this mature glycosylation pattern that significantly increases its serum half-life, mature glycosylated antithrombin III (ATIII), mature human serum albumin characteristics, or mature active subtilish BNN'. These proteins are useful therapeutically (e.g. AAT for treating emphysema, ATIII as many, is more included and the protein contains and the contains and the contains and the protein and the same proteins are useful therapeutically (e.g. AAT for treating emphysema, ATIII as many, is more included the protein and th

Sequences known to be physiological substrates for Factor Xa were selected and used to replace the wild-type PvuII-StuI fragment of the original ATIII SUN A sequence (see AAQ10323). The substitutions are Ala(391) to Asp, Ser(394) to Ile and Asn(396) to Glu. (Numbers refer to mature AIIII). The substitutions result in a shift in the heparinseppendent inhibition profile of AIIII towards factors IIa and Xa. See also AAR10380-2 and AAR10384-R10390.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    415..436
/label= P-region
/note= "substitutions occur in this region which is
positions 383-404 in mature ATIII"
Mutations introduced into the ATIII reactive centre P-region are derived from the human prothrombin gene. Sequences known to be physiological substrates for Factor Xa were selected and used to replace the wild-type PvuI-StuI fragment of the original ATIII CDNA sequence (see AAQ10323). The substitutions are (given as positions in mature ATIII): Ala(384) to Glu, Val(389) to Leu, Th(386) to Leu, Ala(387) to Glu, Val(388) to Ser, Val(389) to Tyr and Ala(391) to Asp. The substitutions result in a shift in the heparin-dependent inhibition profile of ATIII towards factors IIa and Xa.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Mutations introduced into the ATIII reactive centre P-region are derived from the human prothrombin gene. Sequences known to be physiological substrates for Factor Xa were selected and used to replace the Wild-type PvuII-Stul fragment of the original AIIII CDNA sequence (see AAQ10323). The substitutions are (given as positions in mature AIIII) + Ala(391) to Asp and Ser(394) to Ile. The substitutions result in a shift in the heparin-dependent inhibition profile of AIIII towards factors IIa
                                                                                                                                                                                                                                                           antithrombin 3; P-region variants; heparin-dependent; Factor IIa;
Factor Xa; meizothrombin; blood coagulation.

substituted. The invention covers the substitution of Ile at this position (= Mutant #10, see AR10389). The nature of the substitution was found to be crucial in conferring inhibitory profile to the ATIII polypeptide. Substitutions (other than Ile) that represent a hydrophilic character predict a specificity of heparin-dependent inhibition towards Factor xa. See also AA210323 and AAR10380-9.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

                                                                                                                                                                                                                                  Mutations introduced into the ATIII reactive centre P-region are derived from the human prothrombin gene. Sequences known to be physiological substrates for Factor Xa were selected and used to replace the wild-type PoulI-Stul fragment of the original ATIII The substitutions are AAQ10323). (Numbers are for mature ATIII). The substitutions are AIA(384) to Glu, Ser(385) to Leu, TIII). Thr(386) to Leu, AIA(387) to Glu, New 1388) to Ser, Val(389) to Glu, Pro(377) to Glu, Pro(395) to Ser, Val(389) to Asp, Asn(396) to Ala, Thr(401) to Glu, Phe(402) to Ile and Lys(403) to Asp, Val(400) to Ala, Thr(401) to Glu, Phe(402) to Ile and Lys(403) to Asp, The substitutions result in a shift in the heparin-dependent inhibition profile of AIII towards factors IIa and Xa.

                                                                                                                                                                                                                                                                                                              Mutations introduced into the ATIII reactive centre P-region are derived from the human prothrombin gene. Sequences known to be physiological substrates for Factor Xa were selected and used to replace the wild-type PvuII-Stul fragment of the original ATIII CDNA sequence (see AAQL0323). The substitutions are (given as positions in mature ATIII): Ala(391) to Asp, sequence (see AAQL035), to val and Asn(396) to Glu. The substitutions result in a shift in the heparin-dependent inhibition perofile of ATIII towards factors IIa and Xa.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      antithrombin 3; P-region variants; heparin-dependent; Factor IIa;

           Mutations introduced into the ATIII reactive centre P-region are derived from the human prothrombin gene. Sequences known to be physiological substrates for Factor Xa were selected and used to replace the wild-type PoulI-Stul fragment of the original ATIII cDNA sequence (see AAQ10323). The substitutions (given as positions in mature ATIII) are Ser(394) to Ile and Asn(396) to Glu. The substitutions result in a shift in the heparin-dependent in all inhibition profile of ATIII towards factors Ila and Xa. See also AAR10380-4 and AAR10386-R10390.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         415..436/

                                                                                                                                                                                                                                                                                                     // Alabel= P-region // Alabel= P-region // Alabel= P-region // Alabel= "substitutions occur in this region which is positions 383-404 in mature ATIII"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Mutations introduced into the ATIII reactive centre P-region are derived from the human prothrombin gene. Sequences known to be physiological substrates for Factor Xa were selected and used to replace the wild-type PVUII-Stul fragment of the original ATIII CDNA sequence (see AAQ10323). The only substitution is Ala(391) to ASP. (Numbers refer to mature ATIII). The substitution results in a shift in the heparin-dependent inhibition profile of ATIII towards factors IIa and Xa.

                                                                                        0;
                                                                                                                                                                                                                                                                                            Sequence 4, Application US/08954724
Patent No. 5912132
GENERAL INFORMATION:
TITLE OF INVENTION: Identification of Ligands by Selective
TITLE OF INVENTION: Amplification of Cells Transfected with
TITLE OF INVENTION: Receptors
NUMBER OF SEQUENCES: 13
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            APPLICANT: Brann, Mark R. TITLE OF INVENTION: Identification of Ligands by Selective TITLE OF INVENTION: Amplification of Cells Transfected with

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 6, Application US/10109886

Patent No. US20020119499A1

GENERAL INFORMATION:

APPLICANT: TANABE SEIYAKU CO. LTD.

APPLICANT: TANIGUCHI, TOMOYASU.

APPLICANT: TANIGUCHI, TOMOYASU.

TITLE OF INVENTION: MATAGONIST TO PPAR

FILE REFERENCE: TANIGUCHI=6

CURRENT APPLICATION NUMBER: US/10/109,886

CURRENT PELLING DATE: 2002-04-01

PRIOR FILING DATE: 2002-04-01

PRIOR FILING DATE: 1998-08-24

PRIOR FILING DATE: 1998-08-24
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                           Gaps

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
